What is a "station?"

- Retrograde -- "moving backwards," it's a visual illusion, but a meaningful, observable and measurable one
- Station Pluto (or any planet) seems to slow, stop, and turn backwards or forwards
- Phrasing, "Pluto is stationary and turning retrograde," or "Pluto is stationary retrograde" or "Pluto is stationary direct"
- Stations tend to lead to pivotal events, which can trigger changes in us, and that will happen according to the nature of the transiting planet.
- Post-Retrograde process the lessons and changes to implement when the planet goes direct

Effect of Pluto's motion this year is most noticed if you have:

- Planet, MC, ASC 12 to 15 degrees Capricorn
 Transiting Pluto is conjunct these points
- Planet in 12 to 15 degrees of Aries, Cancer and Libra — strong transiting aspect to Pluto

- Do
 - deal with that stuff you keep ignoring
 - keep your affairs aboveboard
- Don't
 - Try to hide secrets

Retrograde Motion (using Mars as example):

- Composite image created by superimposing images taken on twenty-nine different dates.
- In the illustration above Mars' images form a large loop, because its orbit is somewhat tilted and it moves relatively fast.
- In each "loop" the planet appears to move to the east (from right to left) prior to opposition (4)
- Mars seems to slow down and reverses its path when near opposition (the middle of the loop)
- Then resumes its eastward motion after passing opposition.
- As the planets stop moving east and start moving west their motion slows at the "stationary" points.
- In the image, this is represented by the fact that the dots are relatively close together near the stationary points, and further apart elsewhere.

Mars Travels from West to East and 'slows' as it nears retrograde

How does Pluto change us?

By putting us through a death and rebirth experience, a "long, dark night of the soul."

- A Pluto transit is the most profound of all the planetary transits: it is nothing less than a total and complete transformation from one way of being to another.
- Example from a class: the metamorphosis of a caterpillar into a butterfly. In the cocoon, the caterpillar's structure is lost, from which, miraculously, the animal finds a new shape as butterfly.
- We often feel we are in meltdown or "lost in the dark," not knowing what we are to become or what life will be like when we emerge
- Employ deep trust in the ways of nature and in oneself. Let go of that which needs to pass away and allowing the new to come forth, without knowing what is to come.
- Pluto transiting your Midheaven might make you feel that you can't face your career anymore.
 Pluto transiting your Moon can bring up emotions and can bring things to light about your family

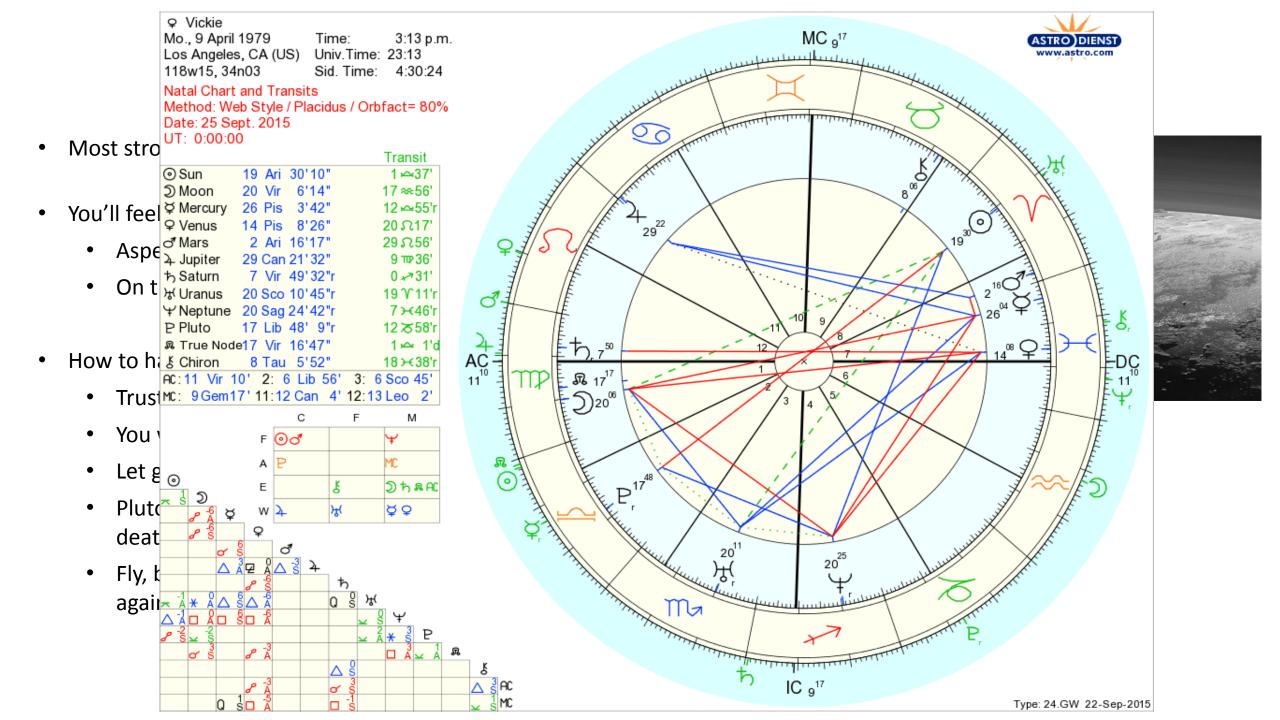

Pluto Retrograde --

- we turned our focus inward to face up to our buried truths
- you may be reassessing relationships in your life to figure out which connections no longer benefit you
- let go of attitudes, thinking or communication patterns
- feel driven to establish security, or rigid, stubborn emotions
- time to undergo an internal form of house cleaning
- examine where and why we continually give our power away
- gain greater control over our personal life

Pluto Direct -

- suppressed desires will return to the surface, permitting us to see our innermost secrets
- be honest, but kind, which will earn trust and renew passion for pursuing our goals
- truths into the spotlight and act as a catalyst
- best way to solve a problem is to first admit that you have one -- Pluto will help you see the problem
- gain greater control over professional and financial areas
